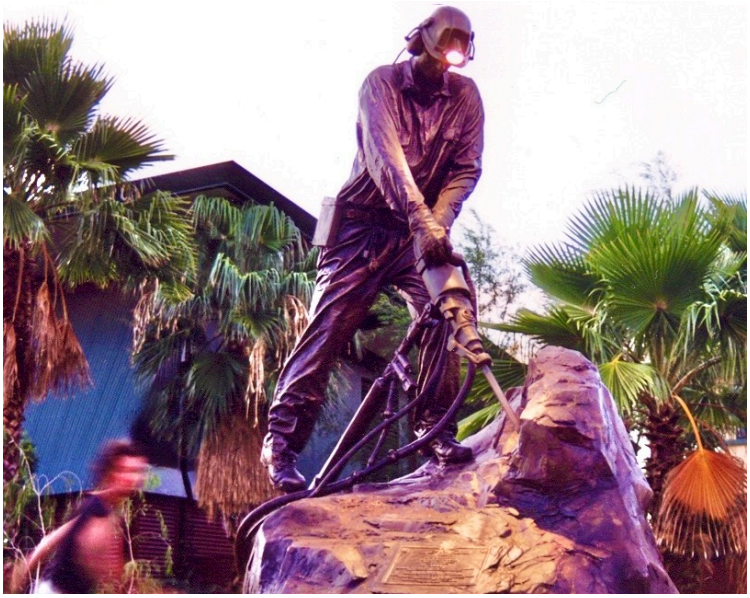
AWARDS	NATIONAL	1
AWARDS	STATE	1
AWARDS	LOCAL	5



When I travel to seek out art galleries, I do not seem to notice any 3D artworks as they seem to be invisible on my radar. I am only interested in the 2D hanging on walls. Ironically, over half my working life, conceptualising and constructing sculptural installations has been my core focus. The Miner, above, was my first bronze at 3 metres high.

Developing ideas into reality involves staging stakeholder presentations, drafting plans for landscaping and foundations, managing schedules, employing skilled subcontractors, fabrication and supervising installations throughout Australia and internationally.

Sometimes a significant contract requires many attributes to achieve desired outcomes ~ each and everyone of my 3D artworks is site specific ~ it is imperative for the theme, medium, technique, size, style and placement to be unique to that specific location… not merely 'a signature style' to suit the ego of the sculptor or their respective branding agent.

Personally, I relish the problem solving & challenges of utilising bronze, corten, aluminium, steel, stone, concrete, electricity, plaster, oxides, perspex, water, rubber, timber and plantings. For me, it all started with creating driftwood statements to enhance parts of the garden. Then entering ephemeral artworks in sculpture festivals. Progressing to being commissioned by local councils to install entry statements or public park icons for regional townships and architectural contracts for resort foyers, boardrooms and hallways. Then in the past 2 decades of having state government contracts for interpretive centres, memorials, sporting venues and recreational precincts.

Our arts industry is top heavy with light weight academics and art bureaucrats insisting artists possess 'a signature style'
my message to them is "go back to the classroom, stop suppressing students & commissioned artists with idiotic ideology and wake up to the reality that we are in the 3rd Millennium,
not the 16th Century".
